DETAILED ACTION

Claims 2, 13, and 22 are not really limitations, but merely inherent in all intake manifolds that are adjustable. In claim 21 the load command signal must be tied into the controller.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 6, 7, 11-16, 21-24, 26, 27, and 31 are rejected under 35 U.S.C. 102(b) as being anticipated by Hiraoka et al. Figure 1 shows multiple plenums at 10 and a tuning valve 30 for selectively allowing communication between the plenums based on engine load and engine speed. The valve is closed when the engine is under high load and low speed.

Allowable Subject Matter

Claims 5, 8-10, 17-20, 25, and 28-30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The remaining references show valves responsive to engine conditions for tuning the intake manifold.
